

## Brayden Hermanson Peer Review

Written by Violet French

Brayden Hermanson is a quick learner and a great partner. He was pretty quick to pick up new concepts as I explained them. Struggle points for him were just some minor typos in the JS when fetching DOM elements from the HTML. This did cost us a little time but overall, it wasn't too bad. These sorts of errors are common especially when using new languages or environments.

My overall impression of Brayden was that he is a talented programmer who just needs time to get comfortable in that position. When I was updating the README with Brayden's GitHub link, I noticed he does not have any public repositories, and his commit history is quite barren. My recommendation for Brayden, if he wants to move towards a career as a software engineer, is to start building his GitHub. That means taking some of your personal time to work on projects you are passionate about. Software Engineers need to stay competitive, and they do this through personal projects. Find a language (I'm biased towards Java) and just start learning what you can do with it.
